

## Appendix 9 Declaration of compliance with quality specifications for firewood

It is hereby declared that the Swan-labeled firewood comply with the quality specifications and requirement limits listed in the table below:

Property	Unit	
Wood species		Must be indicated
Diameter, D <sup>1)</sup>	cm	D2 ≤ 2 D5 2 < D ≤ 5 D15 5 < D ≤ 15 D15+ > 15 (actual value to be stated)
Moisture content <sup>2)</sup>	%, at time of delivery	≤ 20,0
Lower calorific value (energy content)	MJ/m <sup>3</sup> or kWh/ m <sup>3</sup> as received or stacked	Must be indicated
Rot, mould and dust		No visible rot, mould fungus or dust

- 1) At least 85% of the wood must be within the specific diameter class. For stoves, it is recommended to use firewood with a diameter less than 15 cm.
- 2) The moisture content must be determined using the weighing/drying method:

$$\text{Water content (M)} = \frac{\text{wet weight of wood (Ww)} - \text{oven-dry weight of wood (Wo)}}{\text{oven-dry weight of wood (Wo)}} \times 100\%$$
